VOICES, CRITICAL THINKING & THE FUTURE OF AI

AI.PROOF

issue #2 / June, 2026

This issue spotlight is on

The Digital Book of
Experiences

*Authentic stories,
reflections and insights
from across Europe*

Exploring how people across Europe experience, question and shape the digital world and artificial intelligence.

The AI.Proof project continues to grow and is entering one of its most exciting phases. Over the past months, partners from across Europe have worked together to collect experiences, perspectives and reflections related to artificial intelligence, digital literacy and the rapidly changing technological environment we all live in.

A major milestone has now been reached with the completion of the testimonial collection. At the same time, the development of the AI.Proof podcast series is advancing steadily, with several episodes already prepared for publication.

Through collaboration between organisations, educators, experts and communities from different European countries, the project continues to focus on critical thinking, AI literacy, digital inclusion and the human impact of technology.

The coming months will mark the release of some of the project's most important outputs — including the Digital Book of Experiences and the first AI.Proof podcast episodes.

The Digital Book of Experiences Is Coming Soon

What does artificial intelligence mean for people in their everyday lives? How do educators, youth workers, experts and citizens perceive the opportunities and risks connected to AI and digital technologies? What concerns, hopes and lessons emerge when people reflect honestly on their digital experiences?

To explore these questions, the AI.Proof project has gathered more than 60 testimonials from across Europe which will be included in our Digital Book of Experiences.

The publication brings together diverse voices from different countries, professions and backgrounds. Some contributors approach AI with curiosity and optimism, while others raise important questions about misinformation, ethics, digital dependence and the future of work. Together, these stories create a more human and relatable conversation around technology and artificial intelligence.

Currently in its final editing and design phase, the multilingual digital publication will soon be released online and made accessible to audiences across Europe

AI.Proof Project -Where We Are Now

Completed Tasks

- ✓ Collection of international testimonials
- ✓ Development of podcast episodes
- ✓ Partner coordination and collaborative activities

Ongoing Activities

- ↻ Final editing and design of the Digital Book of Experiences
- ↻ Publication and dissemination preparation
- ↻ Podcast publication and communication campaign

Coming Next

- ➡ Launch of the digital publication
- ➡ Online release of podcasts
- ➡ New dissemination activities and outreach campaigns

Voices from Europe

Bulgaria - Mario Mitonchev

Generative AI works best as a collaborative tool. It augments human reasoning rather than replaces it.

Denmark – Olivia Heslinga

“AI alignment starts with the values of people and organisations. Technology should empower people, not replace human understanding.”

Austria – Christian Steinacher

“Artificial intelligence is not a threat — it is a tool. Those who learn to use it early will be able to reap enormous benefits.”

Spain – Leticia Sagredo

“We trust AI too much, and we need to consider it for what it is: a support tool.”

DE Germany – Juan Agustin

“Ultimately, AI is technology, and technology is, in history, not only a determining factor in the growth of a nation, but also in how much said nation can bully others into compliance - something that unfortunately has become relevant again in recent times.”

A big “Thank you!” to all participants, educators, experts and organisations contributing to AI.Proof. Your engagement helps build a more inclusive and human-centered conversation about AI in Europe.

New Conversations About AI Are Now Beginning

Artificial intelligence is transforming how young people learn, communicate and access information, creating both new opportunities and challenges related to misinformation, critical thinking and the future of work.

To explore these issues, the AI.Proof podcast series offers engaging conversations on topics such as media literacy, disinformation, digital responsibility and the changing labour market. Rather than presenting AI as simply “good” or “bad,” the series encourages critical reflection on its impact on society, education and employment.

Through expert insights, practical reflections and real-world examples, the podcasts make complex AI topics more accessible and relevant for young people, educators and the wider public.

Working Across Borders

One of the key strengths of AI.Proof is its international partnership, bringing together diverse expertise and experiences from across Europe. Through collaboration, shared practices and joint activities, partners are creating resources that are practical, accessible and relevant for different audiences.

The project demonstrates that AI literacy is not only about technology—it is also a social, educational and human challenge.
